

Meadowbrook Community Hospital

DISCHARGE SUMMARY

Patient: Tyler Nguyen

DOB: 05/17/1997 (Age 29)

MRN: MRN-2025-0203

Admission Date: 08/11/2026

Discharge Date: 08/13/2026

Attending Physician: Dr. Rachel Kim, MD (General Surgery)

ADMISSION DIAGNOSIS:

1. Acute non-perforated appendicitis (K35.80)

PROCEDURE PERFORMED:

- Laparoscopic appendectomy (08/11/2026, uncomplicated; pathology: acute appendicitis without perforation, margins benign)

HOSPITAL COURSE:

29-year-old healthy male who presented with 18 hours of periumbilical pain migrating to the right lower quadrant with anorexia. CT demonstrated appendiceal dilation with periappendiceal inflammation. Underwent uncomplicated laparoscopic appendectomy the same evening. Post-operative course notable only for expected mild leukocytosis, which trended down appropriately. Advanced diet POD1, ambulated independently, pain controlled on oral analgesia alone by POD2.

CONDITION AT DISCHARGE:

Afebrile, tolerating regular diet, bowel function returning, comfortable on oral analgesics.

DISCHARGE MEDICATIONS:

1. Ibuprofen 600 mg PO q6h PRN pain (with food)
2. Oxycodone 5 mg PO q4h PRN severe breakthrough pain (limited quantity dispensed)

ALLERGIES: No known drug allergies

WOUND CARE:

Incisions may be showered 24 hours post-op. Pat dry. No baths or swimming x 2 weeks. Steri-strips will fall off on their own.

ACTIVITY:

No lifting >15 lbs x 2 weeks. May return to desk work in 1 week; sports in 4 weeks.

FOLLOW-UP:

- Surgery clinic in 10-14 days for incision check and pathology review
- Immediate return for: fever >101, wound redness/drainage, persistent vomiting, abdominal pain escalation

DISPOSITION: Discharged to home with brother present.
